UGD	Unidade de Gestão da Dívida Pública (Public Debt Management Unit)
PIP	Public Investment Program
ISIN	International Securities Identification Number
EFF	Extended Fund Facility
USD	United States Dollar

FOREWORD

INSTITUTIONAL FRAMEWORK

The Public Debt Management Unit, abbreviated as UGD, is a State body, endowed with legal personality and administrative, patrimonial and financial autonomy. It carries out its activity under the supervision of the Ministry of Finance.

It is governed by the Organic Statute approved by Presidential Decree No. 227/16, of the 17th of November, by the Internal Regulations and, alternatively, by the Legal Regime of Public Institutes and other applicable legislation.

PUBLIC DEBT MANAGEMENT FRAMEWORK

Law No. 37/20, of 30 October, establishes the legal framework for sustainable fiscal policy, reinforcing budgetary discipline, transparency, and predictability in public finance management. It provides the foundation for a responsible and sustainable debt strategy.

The Medium-Term Debt Strategy 2024–2026 was developed with the purpose of establishing goals and objectives in the process of contracting new financing, allowing a more judicious approach in the management of costs and risks associated with the public debt portfolio. This approach aims to ensure greater predictability, sustainability and fiscal discipline in the medium term.

The strategy, in force, integrates a set of strategic objectives, among which the following stand out:

- The improvement of the methodology and criteria applicable to the contracting of new financing;
- The promotion of sustainable financing instruments, with a focus on environmental, social and governance (ESG) principles, in alignment with the Sustainable Development Goals (SDGs);
- The non-use of financing with commodity-based guarantees;
- The limitation of the concentration of debt service in the short term;
- The reconfiguration of the debt maturity profile, promoting a balance between external and internal financing.

Additionally, the strategy includes the possibility of an annual review, allowing for its reassessment and adjustment whenever significant changes in macroeconomic conditions justify. This mechanism ensures continued alignment with the operational context.

DATA COVERAGE, METHODOLOGY AND SOURCES

A. DATA COVERAGE

This bulletin considers primarily the Government Debt. Information on state-owned enterprise debt and State-guaranteed debt is presented in Section 4, where this topic is dealt with in detail.

B. METHODOLOGY

The Statistical Bulletin aims to present, on a quarterly basis, data on Angola's debt. It is composed of tables and charts that present Angola's debt from various angles, taking into consideration the specificities of the government debt portfolio and economic indicators.

This edition covers the 1st Quarter of 2026, as well as the quarterly evolution since the same period of the previous year. The main currencies used are Kz (Kwanza) and USD (US Dollar). Currency conversions are carried out in accordance with the following rules:

- The bonds are converted using the exchange rate prevailing on the valuation date;
- Flows are converted using the average exchange rate for the reporting period;
- Projections are converted using the exchange rate in effect at the end of the analysed period (e.g., Q1 2026);
- Outstanding debt values are expressed at par value;
- Securities delivered as REPO collateral are not included in the Government Debt Stock, only the financial value of the transactions is considered in the Stock..

C. SOURCES

- The aggregated data are extracted from the Database of the Public Debt Management Unit, which gathers information from the following systems: DMFAS, SIGMA and CAPIZAR.
- The exchange rates used for the conversion of currencies into national currency are sourced from the BNA (International Financial Statistics) website.
- Macroeconomic data come from the Ministry of Planning.

GENERAL OVERVIEW

Chart 1: Evolution of the Government Debt Stock (in US\$1 billion) and the Debt/GDP Ratio.

Source: UGD

In the first quarter of 2026, the government debt stock rose to USD 69.43 billion, representing an increase from the USD 66.02 billion recorded in the previous quarter, resulting from issuances of USD 7.60 billion exceeding redemptions of USD 4.13 billion. Despite the nominal increase, the Debt-to-GDP ratio stood at 46.39%, slightly below the 46.59% recorded in the previous quarter, reflecting an evolution consistent with sustainability objectives.

Source: UGD

During this period, the government debt stock evolved in line with the defined financing strategy, reflecting a net increase associated with issuances of USD 7.60 billion, albeit at levels below the USD 12.16 billion recorded in the previous quarter. The external component maintained a relevant role in covering financing needs, while the domestic market continued to ensure a consistent contribution. On the redemptions side, a reduction to USD 4.13 billion was observed, compared to USD 9.64 billion in the previous quarter, explained mainly by lower external debt amortisation following the peak recorded in the preceding period. This dynamic resulted in an increase in the stock to USD 69.43 billion, consistent with a trajectory of prudent management that prioritises maturity extension and the mitigation of refinancing risk.

GENERAL OVERVIEW

Table 2: Government Debt Stock by Maturity, in USD billion.

Description	IQ 25	IIQ 25	IIIQ 25	IVQ 25	IQ 26
By Original Maturity	60,77	61,93	63,63	66,02	69,43

External Debt

Chart 2: Evolution of External Debt by Type of Creditor (in USD billion)

Source: UGD

Graph 3: External Debt by Type of Creditor in IQ 2026 (in %)

During the first quarter of 2026, the composition of external debt remained concentrated in commercial debt (40%), followed by Bondholders (25%), multilateral (21%), suppliers (8%) and bilateral (6%). This structure reflects a greater use of market instruments, reinforcing flexibility in debt flow management and promoting the broadening of the investor base, in line with the medium-term borrowing strategy for 2026-2028.

Table 7 : Evolution of the External Debt Stock by Creditor Type throughout IQ 2026 (in USD billion)

Instrument	Stock as of IVQ 25 [A]	Disbursements in IQ 26[B]	Capital Repayments in IQ 26 [C]	Other Economic Flows [D]	Stock as of IQ 26 [E] = [A]+[B]-[C]+[D]
	Final Exchange Rate of IVQ 25 (912.286)	Average Exchange Rate in the IQ 26 (912.137)	Outros ajustamentos de Volume	Final Exchange Rate of IQ 26 (912.13)	
Bilateral	2.98	0.11	0.26	0.03	2.86
Commercial	19.50	1.21	0.43	-0.12	20.16
Multilateral	10.85	0.08	0.25	0.00	10.69
Bondholders	10.28	2.50	0.50	0.00	12.28
Suppliers	3.82	0.29	0.25	0.00	3.85
Total	47.42	4.19	1.69	-0.08	49.84

The stock of external debt rose 5.10% to USD 49.84 mM, driven by a faster pace of disbursements than the pace of redemptions over the period. In this context, net external debt stood at USD 2.5 billion, a proportion similar to the overall amount raised in the Eurobond issue carried out on the last day of the quarter.

During this period, External Debt service totalled USD 2.29 billion, with 74% of the service represented by principal amortisations. These figures implied a quarterly reduction of approximately 58% and a year-on-year increase of 30%.

External Debt

Graph 4 : External Debt by currency in IQ 2026

Source: UGD

Chart 5: External Debt by type of interest rate as of IQ 2026

Source: UGD

The external debt portfolio remained heavily concentrated in US dollars (79.65%), while the remaining currencies accounted for a residual share. In terms of interest rate type, approximately 51.35% of the debt is indexed to variable rates and 48.65% to fixed rates, reflecting a balance between flexibility and predictability of financial charges, in line with the active interest rate risk management strategy.

The External Debt service projected until the end of the year indicates an acceleration of amortizations, with an expected effect on a reduction in the External Debt Stock. In this context, the projected service is in the order of USD 7.67 mM, with USD 5.19 mM corresponding to principal payments, USD 2.47 mM to Debt Interest and approximately USD 9.5 million corresponding to commissions to be paid in the context of the Contractual Debt.

External Debt

Graph 7: Composition of External Debt Amortization by Type of Creditor at the end of IQ 2026

Source: UGD

The amortisation profile for the coming quarters is predominantly concentrated in commercial debt, with approximately 55% of projected amortisations for the second half of the year, followed by payments to Suppliers, Multilateral Institutions and bilateral commitments at 21%, 19% and 6%, respectively.

Chart 8: Angolan Eurobond Yield Curve, IVQ 2025 – IQ 2026

Source: Bloomberg

Methodological Note: Estimated yield curves based on the secondary market yields of Angola's EUROBONDS and their average residual maturity.

In the quarter under review, the yields on Angolan Eurobonds showed a positive performance, with reductions across all maturities except the 2032 maturity. This outcome favoured conditions for the strategic issuance of new securities maturing in 2033 and 2035, at rates of 9.375% and 9.875%, respectively. This issuance marked the reopening of emerging markets in a context affected by the US/Israel and Iran conflict.

Oil-backed debt

The stock of oil-collateralised debt recorded a further reduction, settling at USD 7.28 billion at the end of the first quarter of 2026, compared to USD 7.61 billion in the fourth quarter of 2025, maintaining the downward trajectory observed in previous periods.

3 Internal Debt	14
4 SOE Debt and Arrears	18

Internal Debt

Chart 10: Evolution of the Domestic Debt Stock by Type of Instrument (in USD billion)

Source: UGD

At the end of the first quarter of 2026, domestic debt remained strongly concentrated in Treasury Bonds, equivalent to USD 16.42 billion, representing 83.86% of the portfolio. This structure favours medium and long-term instruments, helping to reduce the risk of refinancing, reinforcing the stability of the portfolio.

Chart 11: Domestic Debt by Instrument at the end of the Quarter (as % of Domestic Debt Stock)

Source: UGD

At the end of the period, 57.60% of the Domestic Debt stock was composed of OT-NR, followed by OT-ME at 25.73%, Loan Contracts (7.17%), BT (9%), and the remaining 0.5% split between OT-TXC and OT-TV.

Table 11 : Domestic Debt, Breakdown by Rate Type.

Description	IQ. 25	IIQ. 25	IIIQ. 25	IVQ. 25	IQ. 26
Fixed	97.07%	97.74%	97.90%	98.14%	99.46%
Variable	2.93%	2.26%	2.10%	1.86%	0.54%
TOTAL	100.00%	100.00%	100.00%	100.00%	100.00%

Source: UGD

The composition by interest rate type showed an evolution aligned with the strategy of reducing exposure to indexation, with fixed rate debt reinforcing its share from 98.14% to 99.46%. Conversely, variable rate debt decreased from 1.86% to 0.54%, resulting in greater predictability in debt service and lower exposure to interest rate fluctuations.

Source: UGD

In the first quarter of 2026, the Domestic Government Debt stock rose to USD 19.59 billion. This increase was explained by positive net borrowing and higher contracting through Fixed Rate Treasury Bonds (OT-NR) and Loan Contracts (including REPOs), which recorded net increases equivalent to USD 470.59 million and USD 537.64 million, respectively.

Chart 12: Domestic Debt Amortization Profile as of 31 March 2026.

Source: UGD

At the Domestic Debt level, management has made efforts to reduce short-term debt service pressure. The chart demonstrates a significant reduction in projected amortisations for 2027 compared to 2026, with the debt service profile benefiting from Liability Management operations and the issuance of instruments with residual maturities of more than one year.

AGENDA

	Page
1 General Overview	6
2 External Debt	9
3 Internal Debt	13
4 SOE Debt and Arrears	18

SOE Debt and Arrears

In the quarter under review, the stock of state-owned enterprise debt stood at USD 2.55 billion (approximately 1.70% of GDP), having increased by 18.60%, driven primarily by an additional issuance of approximately USD 400 million by Sonangol.

Table 15 : Detailed stock of state-owned enterprise debt at the end of the first quarter of 2026, in USD billion.

Type	Entity	Stock 31/12/2025	Stock 31/03/2026	Var. %
External	Sonangol	2,07	2,47	19,35%
External	TAAG	0,083	0,083	0,00%
Total	SOE	2,15	2,55	18,60%

In the quarter under review, the stock of arrears stood at USD 2.68 billion, recording a reduction of 3.60% driven by total payments made of approximately USD 97 million throughout the quarter.

Table 16: Detailed stock of overdue debt at the end of IQ 2026, in USD billion

GLOSSARY

CREDITOR

Organization or entity which provides goods and services that are reimbursable under the terms of a loan agreement.

BILATERAL CREDITORS

These are governments. Their claims consist of loans granted or guaranteed by the government or by official bodies such as export credit agencies. Some official creditors take part in debt rescheduling under the Paris Club.

MULTILATERAL CREDITORS

Multilateral institutions such as the IMF, the World Bank Group, and regional multilateral development banks, such as the African Development Bank Group.

PRIVATE CREDITORS

A creditor that is not a government or public sector agency. These include private bond investors, banks and other private financial institutions, manufacturers, exporters and other suppliers of goods who hold a financial claim.

EXTERNAL DEBT

Amount of liabilities to non-residents.

DOMESTIC DEBT

Amount of liabilities to residents.

AVAILABLE COMMITMENTS

The amount of a debt which can still be drawn or disbursed.

OUTSTANDING DEBT

The amount which has been disbursed but not yet repaid or forgiven. In other words, it is the total of actual disbursements less principal repayments.

PRINCIPAL

Capital invested or money loaned or borrowed, possibly bearing interest.

RESTRUCTURING

Restructuring is the modification of the debt repayment terms. It can be carried out either by modifying the contractual terms of the existing debt (this is called "rescheduling"), or by exchanging the debt with a new instrument (in particular, through "refinancing"), or by partial or total cancellation of the debt (debt forgiveness).

DEBT SERVICE

Any payment to be made on account of principal, interest and fees on a loan.
